This paper is concerned with the problem proposed  
by Aizerman in regard to the stability of a set of non-  
linear differential equations. Conditions for stability  
are hypothesized by making a linear analogy to the  
original non-linear system. The validity of these  
(Mathematics, TT, v. 7, no. 9)

THE STABILITY OF AUTOMATIC REGULATION SYSTEMS (Ustoychivost' Sistem Avtomaticheskogo Regulirovaniya). Nov 60 [8]p. 1 ref. RTS 1698.  
Order from LC or SLA m\$1.80, ph\$1.80 61-15210

Trans. of Prikladnaya Matematika i Mekhanika (USSR) 1952, v. 16, no. 4, p. 495-499.

The stability problem of the system of type  $(dx_s/dt) = p_{s1}x_1 + \dots + p_{sn}x_n + F_s(x_1, \dots, x_n)$ , where  $s = 1, 2, \dots, n$ , is considered. For given conditions of  $F_s(x_1, \dots, x_n)$  these functions satisfy, in the region  $|x_s| \leq A$ , the inequalities  $|F_s(x_1, \dots, x_n)| < Q(|x_1| + \dots + |x_n|)$  where  $Q$  is a positive constant. The maximum values of this constant are found for which the equilibrium is asymptotically stable in the Lyapunov sense for any  $F_s$  function that satisfies the above conditions, and the permissible range of initial deviations are determined. A theorem in which these quantities are assessed is given: it is expressed directly in (Mathematics, TT, v. 5, no. 8) (over)
